Proofpoint Data Security & Posture Test Drive:

Proofpoint Data Security & Posture Test Drive is a fully hosted environment, providing all you need to experience how you can defend your data and stop insider threats with Proofpoint Data Security & Posture. Test Drive can be helpful if you have strict change controls, or no access to test machines as Proofpoint will provide the endpoints fully configured for you.

What Are the Outcomes?

After running through the Test Drive, you will have a better understanding as to how Proofpoint Data Security & Posture can accelerate your DLP or insider threat program. Additionally, we can assist you in documenting your findings, for you to share internally with your teams.

What will Test Drive Provide

Test Drive provides a quick and easy way to gain hands-on experience with Data Security & Posture products. Proofpoint will provide you with the following:

- Two virtual machines and logins to simulate the user's actions
- A Proofpoint Data Security & Posture SaaS environment to investigate the user's actions
- A workbook with exercises to demonstrate multiple use cases. Some examples include:
    1. Malicious insider trying to exfiltrate sensitive data
    2. Careless user not being careful with sensitive data
    3. Compromised user (phishing attack) losing data to an attacker
    4. Compromised user (Telephone Oriented Attack Delivery (TOAD) example) losing data to an attacker
    5. Careless user mishandling data in GenAI applications

What's Needed from You?

We ask that you commit your Security or DLP analysts' time to run through the exercises in the workbook. The VM's will be available for 2 weeks to perform the workbook exercises before meeting with your Proofpoint account team to share your feedback on the Test Drive experience.

Customer Testimonial

"The fact that Proofpoint thought to offer and put this together for customers is a game changer. No one else is doing this... It has saved us so much time getting into the testing phase of this project."

– Security Architect, Fortune 500 shipping company

About Proofpoint Data Security & Posture

Data doesn't lose itself. People lose it. Careless users mishandle it. Malicious users walk out the door with it. And compromised user accounts are hijacked to steal it. Transform your data security program with an adaptive, human-centric approach that identifies and mitigates risks before they result in a data breach. Investigate insider threats and prevent data loss across cloud services, email and endpoints.
