

SASE Solutions implementation & Management

Enable a unified approach with strong network security and extend central security policies to remote workers.

Context

The customer needed an alternative to their legacy VPN solution and at the same time wanted to move to a more flexible solution that didn't require any on-prem hardware.

The customer has a slim IT organization and wanted a solution as a service.

Solutions

- SASE approach with a Cloud Access solution as a service including central policy for internet breakout traffic.
- Secure internet breakout perimeter with best of breed security features
- Assures consistent security policies on the network and for remote users
- Centralized Management
