

Orange Cyberdefense expands into Spain in collaboration with MasOrange

- Orange Cyberdefense is deploying its operations in Spain through a strategic partnership with MasOrange, the country's leading operator by number of customers, serving over 30 million users.
- This move marks Orange Cyberdefense's entry into one of Europe's most significant cybersecurity markets, driven by a clear ambition: to become the trusted cybersecurity partner for Spanish public and private organizations.
- The deployment aligns with Orange's "Trust the future" strategy, supporting Orange Cyberdefense in its ambition to reach €2 billion in revenue by 2030.

As a European leader in cybersecurity services, Orange Cyberdefense will bring its unique expertise to the Spanish market, with over 3,300 experts, 36 detection centers across 23 countries, and Europe's first private CERT (Computer Emergency Response Team).

To stay as close as possible to the cybersecurity needs of companies across Spain, Orange Cyberdefense teams will initially be based in Madrid and Barcelona, supported by a dedicated local Security Center (CyberSOC) to provide continuous human-led monitoring and rapid incident response. Initially 100 experts will be recruited to support this development. Orange Cyberdefense will offer innovative and tailored solutions adapted to the size and budget requirements of each company, while also drawing on MasOrange's extensive commercial network to address critical issues.

According to a study by Statista, Spain has been one of the most targeted countries in Europe in recent years, with 54% of companies having experienced a cyberattack. The Spanish cybersecurity market was estimated to be €2.3 billion in 2025, growing at 10%, with a highly demanding public sector that could generate more than €400 million in cybersecurity tenders over the coming years.

Hugues Foulon, EVP and CEO of Orange Cyberdefense: *"In the context of ongoing digital warfare, cybersecurity must be at the heart of every strategy. Cybersecurity is no longer just a necessary expense, but a pillar that transforms organizations and strengthens our economic resilience. As threats continue to intensify, Spanish companies need the support of a trusted partner — a market leader recognized for its 10 years of experience. Our entry into the Spanish market also illustrates the implementation of our strategic plan, 'Trust the future,' with the ambition for Orange Cyberdefense to achieve €2 billion in revenue by 2030 and to actively contribute to the essential European digital sovereignty of our businesses."*

Meinrad Spenger, CEO of MasOrange: *"Cybersecurity has become a top priority for our clients, including businesses, public sector organizations, and individuals. Thanks to MasOrange's modern and advanced fiber and 5G connectivity infrastructure, combined with the expertise of a European leader like Orange Cyberdefense, we will create a unique market offering, establishing Orange Cyberdefense Spain as a benchmark in digital protection for customers across Spain."*

About Orange Cyberdefense

Orange Cyberdefense is the European leader in cybersecurity services, leveraging over 30 years of expertise developed within the Orange Group. Generating a revenue of €1.3 billion in 2025, the subsidiary independently provides managed security services, consulting, and integration solutions, strengthened by its sovereign cyber intelligence capabilities. It supports organizations in anticipating, preventing, and responding to cyber threats 24/7. Its services are powered by research and intelligence, enabling organizations and individuals to gain unparalleled knowledge of current and emerging threats. With over 3,300 multidisciplinary experts across 23 countries and 36 detection centers worldwide, its strong local presence allows it to address both global and local challenges faced by its clients. Its comprehensive, human-centered approach to cyber risks, facilitated by technology such as artificial intelligence, positions cybersecurity as a societal issue at the crossroads of organized crime, hacktivism, and geopolitics. An essential vision for building a safer digital society and maintaining trust in our economies and democracies.

About MasOrange

Cyberdefense

MasOrange is the largest telecommunications operator in Spain by number of customers, with nearly 47 million lines, including fiber optic, mobile telephony (including M2M). Additionally, it offers services for individuals and businesses such as television, insurance, energy, alarms, consumer financing, health, cybersecurity, private 5G networks, and cloud solutions.

The company operates with 8 main national brands (Orange, Yoigo, Jazztel, MASMOVIL, simyo, Pepephone, Lebara, and Lyca) and 5 regional brands (Euskaltel, R, Telecable, Guuk, and Embou), to cover all customer needs across Spain.

MasOrange has access to over 32 million households through its fiber optic offerings and covers 99% of the Spanish population with its 4G mobile network, as well as over 93% with the new 5G technology, connecting more than 4,000 municipalities across Spain. Furthermore, one-third of the Spanish population already benefits from advanced 5G services.

Moreover, MasOrange aims to be the operator with the highest customer satisfaction, to establish itself as a driver of talent, and to lead the purpose-driven economy in Spain by respecting people and the planet. It also works to make technology accessible to all (with a focus on neglected areas in Spain), to protect minors in the digital domain, and to develop products and services that enhance the experience for all customers.
