

Managed MultiCloud Protection with Microsoft Defender

Develop and operate secure apps in hybrid and multi-cloud environments by recovering visibility, enforcing control and strengthening your security posture.

What are you facing ?

In an ever-evolving digital landscape, effectively securing your business is crucial to combat online threats. However, there are four major challenges you may face when implementing an effective security strategy:

Limited Visibility: Gaining comprehensive security and compliance visibility remains a significant challenge, particularly across multi-cloud environment.

- Over 50% of organisations fail to realise cloud value due to poor visibility & governance (*Gartner*)
- Fragmented tools across multi-cloud environments limit unified risk visibility (*Microsoft*)

Misconfigurations are hard to detect. Misconfigurations remain one of the leading causes of security incidents. With most of applications built over 2 or 3 public clouds, chances of misconfigurations are even higher.

- 68% of breaches involve human error (incl. misconfigurations) (*Verizon DBIR 2024*)
- \$4.45M average breach cost (*IBM 2024*)

Continuous Threats: Staying ahead of cybercriminals requires continuous, resource-intensive effort. Data from CISA and Microsoft indicates that the number of actively exploited vulnerabilities continues to grow.

- 600M+ attacks per day observed globally (*Microsoft*)
- Exploits often occur within days of vulnerability disclosure (*CISA*)

Security by design gap: Despite its importance, security is still not consistently embedded into development lifecycles.

- Fewer than 50% of organisations fully integrate security into CI/CD (*Forrester*)
- Late-stage security drives higher costs & slower response (*Gartner*)

Orange Cyberdefense, in partnership with Microsoft, has designed a managed service specifically designed to protect your workloads and infrastructure services against modern threats. Managed MultiCloud Protection strengthens your security posture, while helping you to achieve higher security standards for your applications.

What's in it for your business?

We reduce your critical risks

- Continuous security assessments of your resources
- Risk prioritization and insights from diversified sources in one single view
- Vulnerability scanning, real-time monitoring and attack path management
- Assured compliance with multicloud benchmarks

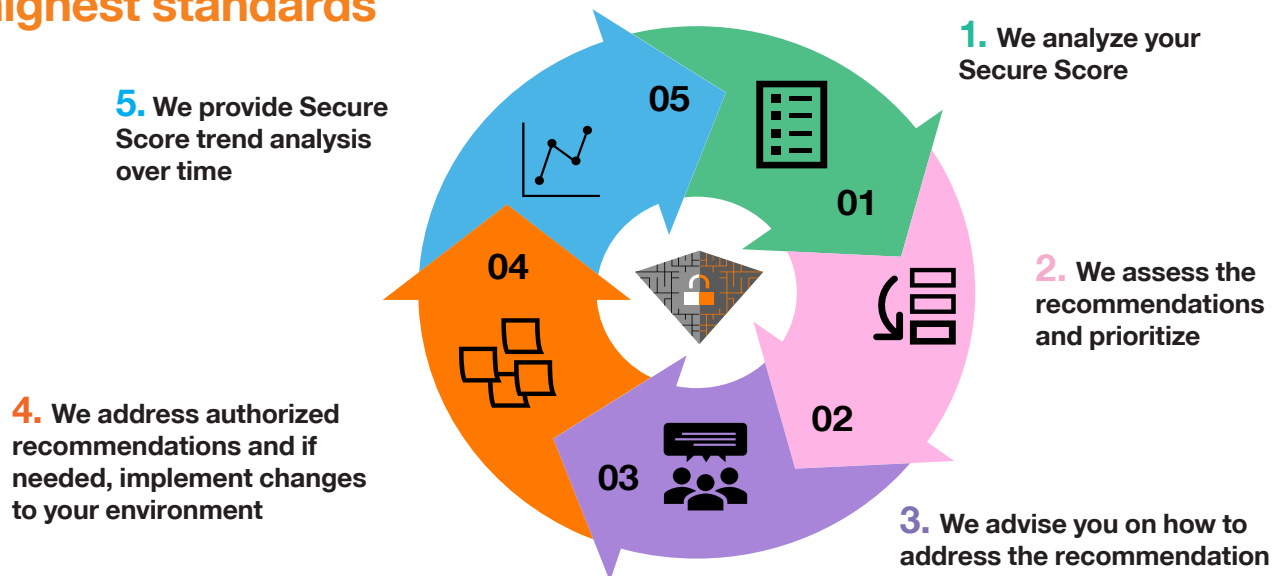

We protect your Cloud workloads

- Defense of your multicloud and on-premises environment
- Response to threats in real time
- Reduction of attack surface via identification of vulnerabilities before they are exploited
- Acceleration on investigations

We speed up multiple pipeline DevOps security

- Unification of visibility of DevOps security posture
- Minimization of blind spots
- Strengthening of cloud resource configurations in code
- Context-driven remediation guidance for a quicker remediation in code

Together, we will make sure your security score meets the highest standards

What are the use cases?

CISO

Gain a top-level view of the multi-cloud security state, and track progress over time.

Security Admin.

Learn from reports with hardening recommendations, rollout of security policies and monitoring of vulnerabilities.

Security Operations

Leverage workload-specific threat detection and response mechanisms to identify attacks, investigate incidents and mitigate threats.

What are the key benefits?

Reduction of the risk of a security breach.

Reduction of time spent on threat mitigation and compliance management.

Cost reduction on security tools and penetration services.

Overall improvement of Security Admin. productivity.

Why choose Orange Cyberdefense?

Our value alongside Microsoft

Microsoft Verified Managed XDR Solution

More than 140 Microsoft certified experts and over 3,000 cybersecurity professionals.

Member of Microsoft Intelligence Security Association (MISA) with a Microsoft-verified-MXDR solution badge.

More than 8,700 customers worldwide and a 24/7 service.

Accredited Microsoft solution partner security.

Representative vendor in the Gartner Market Guides for MDR, Threat Intelligence and Managed Security Services

An entire ecosystem of managed services to anticipate, identify, protect, detect and respond to cyber security threats.
