Managed Firewall
Firewall: Exploit their full potential

Firewalls are the first line of defense that face the current evolving threats. It is a critical component that include full next generation features to protect an organization from internal and external threats while maintaining stateful firewall features such as VPN support or packet filtering.
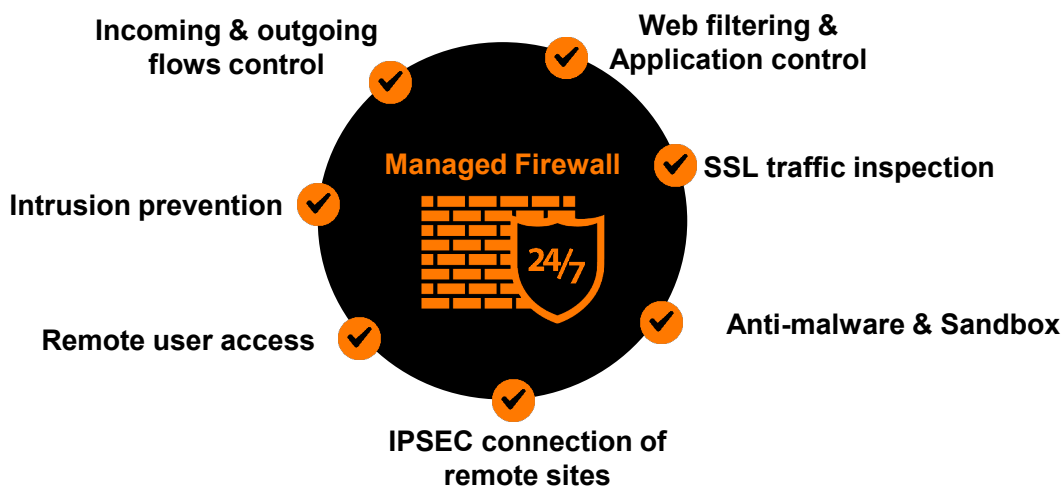

Firewalls are the first point connecting all sites and controlling user access to it which require 24/7 health monitoring with immediate response to avoid outages.

Customers need to tune and maintain firewalls by tracking policy changes and building a detailed risk assessment to avoid unauthorized access. Business applications are changing & policy must be updated and tuned accordingly with complete risk assessment to avoid intrusions.

An all-in-one solution to secure the business

Incoming & outgoing flows control

Web filtering & Application control

Managed Firewall

SSL traffic inspection

Intrusion prevention

24/7

Remote user access

Anti-malware & Sandbox

IPSEC connection of remote sites

Managed firewall is one of the services that operate from within the Orange Security Operations Center. At Orange SOC, customer satisfaction is our highest priority. We know that if our customers are satisfied, they will allow us to build long-term relationships and help us provide better services to all our customers.

A complete managed firewall service

Orange Cyberdefense will provide a dedicated customer solution based on performance-, feature requirements and business needs and will:
