orange™ Cyberdefense

Managed Secure Access

Meeting today's security challenges with Managed Secure Access

Increase security alignment with the business

Today's businesses require secure, seamless access to data and applications anytime, anywhere, on any device. They must protect sensitive information, ensure compliance, and defend

A successful deployment relies on more than just choosing the right technology. It requires the right mix of technology, people, and processes.

Orange Cyberdefense acts as your trusted advisor, helping you integrate SASE and SSE into your existing security framework to strengthen your security posture.

MSA empowers your organization to:

Connect technology with your business outcomes

Maintain a secure posture

Complement the SASE vendor plateforms

What will you have?

Vendor Agnostic
You gain unbiased, flexible security service, tailored to your needs with our vendor-agnostic approach.

ThreatMap to get actionnable insights
ThreatMap, our proprietary threat intelligence, provides you with a reliable second line of defense.

Business Oriented Engagements
You get mesurables results, aligned with your business objectives.

Proactive security posture management
You benefit from strengtened defenses through our continuous monitoring.

Flexible Operational Model
You get customizable approach, tailored to your needs, with options for self-service, co-managed, or fully managed solutions.

Business outome focused
We focus on the business benefits and expertise your organization will gain through our local approach and global reach.

Business Challenges

- Increased complexity due to multiple point solutions with no/little integration among them
- Inconsistent policy enforcement, and the challenge to extend protection policies to cover all types of access (Internet, Cloud, Business Apps).
- Lack of resources to staff a Security Operations Center (SOC) 24x7
- Lack of visibility on end-user digital experience

What will you get?

- 24x7 managed service
- Ability for customers to bring their own subscription (BYoS)
- A tailored roadmap for your organization

When should you consider it?

- Modernizing legacy remote access
- Consolidating vendors & optimizing costs
- Moving towards Zero Trust
- Enhancing performance and user experience
